PROFESSIONAL SUMMARY

Java Backend Engineer with 1.5+ year of experience building and supporting scalable enterprise systems using microservices and event-driven architectures. Strong expertise in Java, REST APIs, database integration, asynchronous messaging (JMS/EMS), and distributed caching. Experienced in containerized deployments using Docker and OpenShift, Agile delivery, and production support. Actively seeking SDE / Backend Developer roles.

TECHNICAL SKILLS

Languages: Java, C/C++, Python

Backend & Frameworks: Spring Boot, RESTful APIs, JDBC, Servlets, Microservices Architecture

Integration & Messaging: TIBCO BWCE, Flogo, JMS/EMS, JSON/XML Processing

Databases: PostgreSQL, Oracle, MySQL, MongoDB

Caching & Performance: TIBCO ActiveSpaces, Redis (Basic)

DevOps & Deployment: Docker, OpenShift (OCP), CI/CD Basics

Testing & Monitoring: JUnit, Mockito, Postman, Elastic, Grafana

Tools: Git, GitHub, Maven, Swagger

Core Computer Science: Data Structures & Algorithms, Distributed Systems, Design Patterns

WORK EXPERIENCE

Associate Software Engineer - Tech Mahindra Ltd., Hyderabad

(August 2024 – Present)

Project: IOH DMP Consolidation

- Built and maintained enterprise backend and integration services using TIBCO BWCE and Flogo in a microservices-based architecture.
- Integrated JMS/EMS-based asynchronous messaging for reliable, event-driven inter-service communication.
- Architected PostgreSQL and Oracle database integrations with optimized CRUD and transactional workflows.
- Engineered distributed caching using TIBCO ActiveSpaces with scheduler-based synchronization for high-performance access.
- Enhanced system responsiveness by serving high-frequency requests from cache instead of direct database queries.
- Created RESTful and SOAP-based web services for multi-client and legacy system integrations.
- Containerized applications using Docker and deployed services on OpenShift (OCP).
- Resolved SIT and UAT defects and ensured stable production releases.
- Analyzed application logs using Elastic and Grafana for proactive issue resolution.

Recognition:

- Received “Pat on the Back” award for delivering complex modules under tight deadlines with high quality.

PROJECTS

Distributed Order Processing System (Saga Pattern Microservices)

Java Backend | Microservices Architecture

- Designed and implemented a **distributed e-commerce backend** using the **Saga Orchestration Pattern** to ensure consistency across Order, Inventory, and Payment microservices.
- Built an event-driven architecture using **Apache Kafka** with separate topics for commands and events.
- Implemented **compensating transactions** (inventory release & order cancellation) for failure scenarios.
- Ensured **idempotent message processing** to handle Kafka's at-least-once delivery semantics.
- Configured **Dead Letter Queues (DLQ)** with retry policies using Spring Kafka error handlers.
- Implemented **optimistic locking (versioning)** to prevent concurrent inventory update conflicts.
- Propagated **trace IDs across services** using MDC for distributed request tracking.
- Designed clear state transitions:
 - CREATED → INVENTORY_RESERVED → COMPLETED
 - Failure path → FAILED → CANCELLED
- Simulated payment gateway behavior with controlled failure injection for resilience testing.

Tech Stack: Java, Spring Boot, Apache Kafka, JPA/Hibernate, MySQL, Docker (optional), REST APIs

EDUCATION

Bachelor of Technology (B.Tech) – Information Technology

Geethanjali College of Engineering and Technology, Hyderabad

2020 – 2024 | CGPA: 8.94 / 10

Intermediate (MPC – Mathematics, Physics, Chemistry)

Geethanjali College of Engineering and Technology, Hyderabad

2018 – 2020 | Percentage: 93.7%

Secondary School Certificate (SSC)

Narayana Concept School, Hyderabad

2018 | CGPA: 9.3 / 10
